

Formed in early 2019, Lykan Bioscience is a revolutionary cell-based therapies Manufacturing Services Organization™ (MSO) that is positioned to work collaboratively with clients to provide new life-saving therapies to patients worldwide.

With decades of biopharmaceutical industry experience in CGMP facility design, software, engineering, manufacturing and Quality operations, Lykan Bioscience provides the first true end-to-end solution for cell-based therapies, including shipping and logistics.

Our experienced team provides Process Development and CGMP manufacturing for autologous and allogeneic cell-based therapies in concert with our Quality Management System which serves the entire product lifecycle.

## Our Offerings

### True end-to-end solutions

For cell-based therapies from patient sample collection at the HCP through to manufacturing and back to the patient.

### Process automation & data integration

Automated collection and integration of manufacturing-related data throughout the process.

### Accessibility to Data

Client visibility to the collected data, such as scheduling, testing data, processing status, process data, & logistics.

## Our Passion

Our passion for the patients pushes us to innovatively enable our clients to save lives. We make it our business to improve and extend lives, even if it's just by one day. Our team's passion for patients uniquely defines us. It's not about what we do; it's about why we do what we do.

## OUR DIFFERENCE MEETS YOUR NEEDS

Our 64,000 square-foot, purpose-built facility and proprietary software are uniquely designed to collect and integrate product and manufacturing data as well as provide direct client access to project information at any time.

Lykan can meet your immediate needs with capacity availability and also offer long-term vision toward scalability, validation and high-throughput commercial manufacture of your cell-based therapies, whether they are CAR-T, TCR, TIL, iPSC, or other platforms.
